

Abstract: The one time use disposable styptic product is an elongated stem-like applicator with an effective amount of styptic product adhered to one or both ends. The length can vary based on the needs of the user. The one time use disposable styptic product remedies several problems never before addressed by manufacturers of the commonly known "Styptic Pencil" or the several powders and gels associated with styptic. Prior styptic applications do not address blood-borne disease control. An one time use, disposable styptic applicator would allow styptic to thrive in industries such as nail salons, barber shops, tattoo and/or piercing parlors and many other similar industries. The product is safely used and disposed of promptly after each use. This is cost effective and a possible solution to the threat of blood-borne diseases in these or similar markets. Styptic is not currently available in a disposable one time use dosage or packaging.
